Re 2027 plan: Early Return Nursing placement and the AY2027 indemnity credit

Seventeen ERN teams: three each to five units, two to retail strains, a $4.1 million AY2027 credit

I propose we place three Early Return Nursing teams each in healthcare and social assistance strains and sprains (HC-SS), manufacturing strains and sprains (MF-SS), manufacturing other injuries (MF-OT), construction other injuries (CN-OT), healthcare and social assistance other injuries (HC-OT), and two in retail and warehousing strains and sprains (RW-SS); none in retail and warehousing other injuries or construction strains and sprains. At run rate the seventeen teams save $4,100,000 of AY2027 ultimate indemnity, the credit Pricing books in the pick.[1]

Unit	Segment	Teams	Saving per team-year
Healthcare 1	HC-SS healthcare and social assistance strains and sprains	3	$290,000
Retail and Distribution 1	RW-SS retail and warehousing strains and sprains	2	$290,000
Manufacturing 1	MF-SS manufacturing strains and sprains	3	$280,000
Manufacturing 2	MF-OT manufacturing other injuries	3	$210,000
Construction 2	CN-OT construction other injuries	3	$200,000
Healthcare 2	HC-OT healthcare and social assistance other injuries	3	$190,000
Retail and Distribution 2	RW-OT retail and warehousing other injuries	0	$130,000
Construction 1	CN-SS construction strains and sprains	0	$120,000
Total		**17**	**$4,100,000 credit**

The pilot assigned intakes to the nurses at random at triage, and in the strain segments the nurses kept part of their intakes at work on suitable duties, so those intakes never paid indemnity: in healthcare strains 64.9% of the nurses' intakes paid indemnity against 86.6% under usual handling. Read by assigned intake, as the pilot was randomised, a healthcare strain intake saves $857, and its file is short (21.40 place-days), so a team turns its twenty places over often and saves $290,000 a year. Read on the verified indemnity claims alone, the strain segments look like a few per cent of a claim and the healthcare and retail strain units would get no team.

Retail and warehousing strains would take a third team on saving alone, but its 944 intakes in the twelve months to September fill 2.44 teams' places, so the seventeenth team goes to healthcare other injuries.

[1] *At run rate, every place in use every day of 2027, at Kellerman Pryce's verified ultimate indemnity at 30 June 2026 with no trend (AY2027 pick memo, 28 October 2026). Indemnity only; medical sits in the medical pick.*
