Subject	Mobile screening unit: posting for 15 June to 31 August 2027

Post the unit to Eskerford: it moves 342,200 passengers within the 20-minute standard this summer, against 272,600 at Halloran Bay

Posted to Eskerford from 15 June to 31 August, the unit would move 342,200 passengers through screening within the 20-minute standard who would otherwise wait longer. The next best posting, Halloran Bay, would move 272,600; every other airport less.

On the summer roster patterns with the unit's three lanes added, Cullinvale would come first and Eskerford fourth. That is not what a posting adds. In every posting week last summer the host's duty managers stood down lanes of their own while the unit screened, two through the evening bank at all eight and through the morning bank at six of them, and more in the quiet middle of the day, so at those banks the unit added one lane and not three.

Nor is a roster pattern what a checkpoint opens. Seven of the eight open fewer lanes at their banks than their pattern staffs, every day of the summer and whether or not the unit is there, because the pattern's shoulders go uncovered: two lanes of them at Eskerford, one at the other six. Judged against the patterns, the posting at Eskerford is worth 208,700 and Halloran Bay comes first; judged against the lanes Eskerford itself opens on its own days, which is what this summer looks like without the unit, it is worth 342,200 and comes first.

Design days of Capacity Planning's summer 2027 planning sheet, each standing for every day of its period, run through KAS-STD-07 sections 4 and 6.

How far the forecast can fall. Eskerford stays the better posting unless its forecast passengers fall short by 13 per cent or more across the summer, the smallest whole per cent shortfall at which a posting at Halloran Bay would move more.

Passengers the unit would move within the standard over the summer, by posting

Posting	Bank lanes the pattern plans and the checkpoint does not open	Own lanes stood down, morning bank	Own lanes stood down, evening bank	Passengers moved, 15 June to 31 August 2027
Eskerford	**2**	**1**	**2**	**342,200**
Halloran Bay	0	1	2	272,600
Ardcarrig	1	2	2	240,800
Cullinvale	1	2	2	231,900
Faranloe	1	2	2	202,800
Glenkessan	1	2	2	163,700
Brennagh	1	2	2	145,900
Dromkeel	1	2	2	135,400

Nearest hundred, from unrounded counts. Every host also stood down lanes in the quiet middle of the day and the last 45 minutes, where no queue builds.

Last summer at each airport

Airport	Passengers screened, 15 June to 31 August 2026	Hotel cost per officer-night, EUR	Posting weeks	Expense claims per posting week, EUR
Eskerford	**841,500**	**98.50**	**1**	**8,163.34**
Halloran Bay	590,000	112.98	1	8,091.04
Ardcarrig	1,051,700	110.01	3	7,339.69
Cullinvale	1,215,800	116.72	2	7,135.92
Faranloe	992,800	90.30	1	7,991.56
Glenkessan	593,300	93.73	1	8,724.60
Brennagh	704,000	84.70	1	8,247.46
Dromkeel	816,900	95.40	1	8,824.96

Passengers screened: the checkpoint's passenger lanes and the unit's lanes while it was there; the staff and aircrew searched at the shift changes are not passengers. Hotel cost: every invoice and credit note on the posting's purchase order, as paid, over the officer-nights stayed. Claims: each claim line once, each claim with the posting it was made for, travel to and from the posting included.

Method

Each checkpoint's lanes without the unit are the lanes it opens on its own days: its summer 2027 roster pattern less the bank lanes it does not open, read off the 2026 lane counts on the days the unit was elsewhere against the summer 2026 roster pattern, which plans the same lanes as the 2027 one. Its lanes with the unit are those less the lanes its duty managers stood down in each 15 minutes of every posted day last summer, plus the unit's three lanes from 05:00 to 21:00. Both the unopened lanes and the stand-down were the same on every day of the summer at every checkpoint, Ardcarrig's two posted weeks running included. The passengers moved are those outside the standard without the unit less those outside it with the unit, on each design day, times the days in the period (16, 31 and 31).

Taking each roster pattern as the lanes open, rather than what the checkpoint opens, moves the figures at seven of the eight airports and the posting to Halloran Bay.
