# Place the IP-10 team with Alderbrook Orthopaedics: 17 complications avoided, 6 more than the closest unit

Clinical Improvement Partnership, cycle IP-10 (1 April to 30 June 2027). For the Clinical Quality Committee, 24 March 2027. Prepared by Clinical Improvement.

The team should embed with **Orthopaedics at Alderbrook Hospital, cost centre 41230**. The unit's planned 2,305 separations for the quarter carry 192 expected complications, it has stood at 1.23 times its expected complications across the ten closed quarters of specification 4.0, and the 44 complications that standing puts above expectation are the largest avoidable number in the network. On what the partnership's seven closed placements have taken off a unit's standing excess, the placement avoids **17 complications** over the quarter, against 11 at Alderbrook General Surgery, the closest unit.

Every eligible unit, its planned activity for the quarter and what a placement there would take off it, is in the placement workbook.

## The three units the committee asked about

**Alderbrook General Medicine** is carrying the most complications above expectation right now, 34 of them in the December quarter, and that is the placement the quarter in hand points to. Its own ten quarters put 6 above expectation on the quarter's planned activity, so most of what it is carrying now is its own quarter-to-quarter movement rather than a position a placement can work on: there, a placement avoids 2.

**Stonecreek Vascular Surgery** stands worst of the twelve on its own record, but it is a small unit: its planned 506 separations for the quarter carry 16 complications above expectation, so a placement there avoids 6.

**Alderbrook General Surgery** will record more complications than any other unit next quarter on the elective catch-up volume in the plan, and most of them are the complications its case mix is expected to produce: 29 sit above expectation, and a placement there avoids 11.

## How the figures were put together

Observed and expected complications are specification 4.0's, from the episode extract to 31 December 2026, and tie to the quarterly indicator series. Each unit's expected complications for the quarter are clause 3.4's: the separations the activity plan carries times the unit's expected complications per separation over the specification period. What a placement takes off a unit's standing excess comes from the seven closed placements in the register, each measured against what the unit stood at over its own closed quarters before the team arrived.

| Unit | Cost centre | Planned separations | Expected complications | Complications avoided |
|---|---|---|---|---|
| Alderbrook Orthopaedics | 41230 | 2,305 | 192.1 | 17 |
| Alderbrook General Surgery | 41220 | 3,367 | 257.2 | 11 |
| Marrowfield General Medicine | 41420 | 1,162 | 94.3 | 9 |
| Stonecreek General Medicine | 41310 | 1,364 | 110.8 | 7 |
| Stonecreek Vascular Surgery | 41330 | 506 | 51.3 | 6 |

Cost centre 41510 has reported under its own code since the Carrowdean medical wards were amalgamated on 1 October 2025, and its five closed quarters meet clause 4.2. Rehabilitation and Aged Care at Marrowfield, where the team is until 31 March, is not eligible this cycle. Complications avoided are whole complications over the assessment quarter; expected complications are carried to one decimal.
