Re: Schedule 1 contract demand, NSPL service agreement for the Civic Center decks

We should file 110 kW as the contract demand for the first contract year

I recommend Council approve the agreement with **110 kW** entered in Schedule 1 as the contract demand for April 2027 through March 2028. That is the highest billing demand I forecast for the new service in any month of the contract year: **109 kW in January 2028**, set in the quarter-hour beginning at noon. In that quarter-hour North Deck carries 56 kW and South Deck 53 kW. Schedule 1 takes whole multiples of 5 kW, and 109.1 kW comes to 110 kW whether it is rounded to the nearest step or up.

The forecast follows FES-07: each contract month comes from the same month of 2026 at the equipment the service will supply, grown by the 2027 factor of 1.12. I replayed every 2026 charge at the decks on the Exhibit A units at the lower of 11.5 kW and the car's onboard charger rating, after joining the 3,096 charges Curbline's 10 a.m. settlement run splits into two records; at 6.6 kW the replay reproduces every 2026 interval reading at the decks.

At North Deck the county's fleet attendant swaps pool cars: a pool car comes off within twenty minutes of finishing and the next goes on within six, 101 times in 2026. On the new units the car ahead finishes sooner, so the next one starts sooner, after the same wait. On December 8, 2026 that takes four pool cars out of the noon quarter-hour; holding every 2026 start time would put December 2027 at 129 kW and the filing at 130 kW.

The car that counts is the one each permit carries in the contract year: in January the county moved 18 North Deck permits from 2020 Bolt EVs (7.2 kW) to 2023 Bolt EVs (11 kW); with the 2026 cars the year would peak at 149 kW in February. Ricardo Moore expects everyone charged before lunch, and the 11 kW cars nearly always are, but 39 of the 73 permit vehicles are listed at 7.2 or 7.7 kW, and most of January's peak is theirs.

North Sound Power & Light's planners size at nameplate times the diversity factor in Section 7 of their planning guide: 32 units at 11.5 kW times 0.60, to the next 5 kW above, is **225 kW**, which I expect Paul Henderson to propose. Ours is **115 kW lower**, worth \$15,732 a year at Schedule 26's \$11.40 a month per contracted kW. Section 4 of the agreement asks for the maximum billing demand we expect, and under Section 4 of Schedule 26 a month above 110 kW would reset the contract to that month's demand, rounded up to the next 5 kW, for twelve months.

Contract month	Built from	Forecast billing demand (kW)
April 2027	Apr 2026	74
May 2027	May 2026	77
June 2027	Jun 2026	87
July 2027	Jul 2026	80
August 2027	Aug 2026	67
September 2027	Sep 2026	95
October 2027	Oct 2026	86
November 2027	Nov 2026	79
December 2027	Dec 2026	97
January 2028	Jan 2026	109
February 2028	Feb 2026	76
March 2028	Mar 2026	82
Contract demand, first contract year		110

Source: Curbline settlement and interval exports, sessions plugged in January to December 2026 at the 32 deck units, deliveries through January 18, 2027; Parking Services permit registry, vehicle checks (renewals through January 15, 2027) and vehicle reference list.

Billing demand as Schedule 26, Section 3 defines it: the highest average kW in any fifteen-minute interval beginning 12:00 noon through 7:45 p.m., Monday to Friday, outside the listed holidays, both decks summed behind the new service's one meter. Factor 1.12: FES-07 Table 1, adopted September 15, 2026.
