The program can offer 23,229,780 tonnes for USD 116,148,900

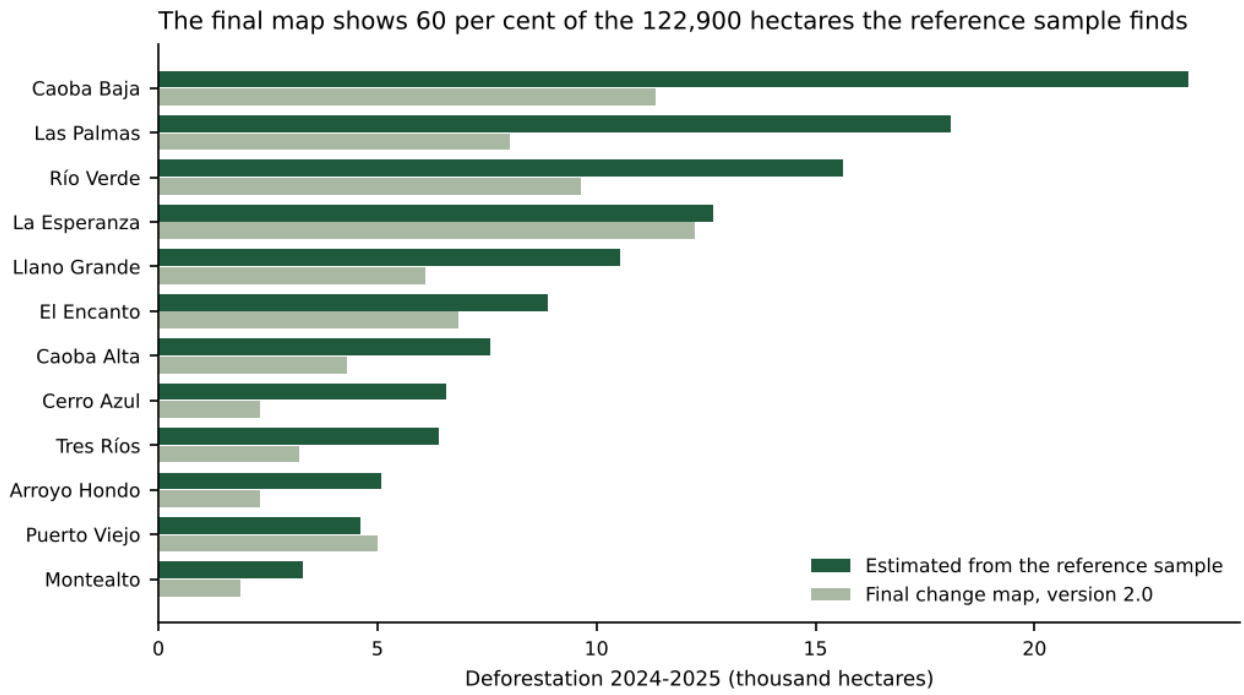

Lowland Forest Emission Reductions Program, monitoring report for 1 January 2024 to 31 December 2025: summary for the Rainforest Results Facility. University Remote Sensing Laboratory, Lilia Solano. 9 June 2026.

Emission reductions

Deforestation in the accounting area over the reporting period was 122,900 hectares (90 per cent confidence interval 100,000 to 140,000 hectares), against a reference level of 179,900 hectares for the two years. At 497.0 tonnes of CO2e a hectare the program emitted 61,081,300 tonnes against reference level emissions of 89,410,300, for emission reductions of 28,329,000 tonnes. After the 18 per cent buffer the program can offer 23,229,780 tonnes, for which the Rainforest Results Facility pays USD 116,148,900.

How the area was estimated

The 4,000 reference points were drawn on 20 January 2026 by stratified random sampling on the preliminary change map, version 0.9: 400 in its deforestation class, 2,400 in stable forest and 1,200 in non-forest. The final map, version 2.0, moved most of the preliminary map's false alarms, and some real clearings, out of its deforestation class, but a point's weight is set by the stratum it was drawn from: 329 hectares for a point of the deforestation stratum, 2,469 for stable forest and 4,785 for non-forest. The area is the sum of those weights over the 224 points the interpreters class as deforestation in 2024-2025 on the national forest definition, after quality control.

Estimates from the reference sample; the final map's areas by pixel counting. Source: National Forest Monitoring System reference sample 2024-2025 and final change map version 2.0.

Deforestation by district

District	Estimated deforestation (ha)	Deforestation patches on the final map	Under 1 ha	5 ha or more
Caoba Alta	7,600	1,806	729	205
Caoba Baja	23,500	4,892	1,982	494
Cerro Azul	6,600	996	404	99
El Encanto	8,900	2,851	1,118	290
La Esperanza	12,700	5,083	1,972	539
Las Palmas	18,100	3,368	1,365	359
Llano Grande	10,500	2,610	1,069	259
Montealto	3,300	797	333	75
Puerto Viejo	4,600	2,025	803	225
Río Verde	15,600	3,932	1,579	431
Tres Ríos	6,400	1,263	500	145
Arroyo Hondo	5,100	925	352	100
Accounting area	122,900	30,548	12,206	3,221

District estimates sum the weights of each district's deforestation points; they carry far wider intervals than the accounting area's and are reported for the benefit-sharing plan. A patch is a connected area of change on the national mosaic, counted once however many tiles and quarters its polygons are delivered in.
