Standard MP-3: measuring member programme offers

Revision 3, 18 March 2026. Owner: Mirjana Felder, programme analytics. Approved by the programme steering group, 24 March 2026. Replaces revision 2 (October 2024).

1 Scope

This standard says how the member programme measures an offer it has tested on member cards, and what the programme's annual budget for an offer is set on. It applies to every offer test run through the offer engine from the summer 2026 test onwards. It does not cover the base points scheme, which finance budgets separately.

2 Net margin

Net margin is gross margin less reward cost, as both are booked in the card-week sales facts. Reward cost carries the base points issued, the offer's own points, and vouchers and coupons funded by the programme, in the week they are booked.

3 Baseline and run-rate weeks

The baseline weeks are the eight ISO weeks before a test opens. The run-rate weeks are the final six weeks of the test. For the summer 2026 test (ST26) the baseline weeks are 2026-W15 to 2026-W22 and the run-rate weeks are 2026-W29 to 2026-W34. The first six test weeks are not used for budgeting, because offers settle after their launch.

4 Incremental net margin

The incremental net margin of an offer is the change in net margin from the baseline weeks to the run-rate weeks under the offer, against the same change without it, and it is stated per active card-week. Every card allocated to the test is an active card. A week in which a card made no purchase counts as a week with zero net margin; it is not left out.

5 Annual programme value

The annual programme value of an offer is its incremental net margin per active card-week, times 52, times the active cards in that year's programme plan. Figures are carried unrounded through the calculation and rounded once, in the figure reported.

6 Regional figures

Regional figures use the regions of the branch network in force on 1 July 2026. A card counts in the region of its membership's home branch.

7 Reporting

Per card-week figures are reported in CHF to two decimals. Annual programme values are reported in CHF thousands. The programme lead takes the offer and its value to the executive board for the budget round; the steering group sees the same figures.

Revision history

Rev.	Date	Change
1	Mar 2023	First issue, after the spring 2023 coupon test.
2	Oct 2024	Reward cost includes programme-funded coupons; run-rate weeks set at six.
3	Mar 2026	Annual value set on the programme plan's active cards; regional figures added.

Distribution: programme steering group; programme finance; CRM and offer engine; data platform.
