Re: 2027 salvage marking under Board Policy 7.4

Mark CF-138, CF-152 and CF-112 for the 2027 salvage program. They are the only stands where the trees tallied live in 2021 and not tallied live in 2026 hold 15 per cent or more of the 2021 live basal area: CF-138 at 59.0 per cent after the Juniper Saddle Fire, and CF-152 at 34.3 and CF-112 at 27.0 per cent from bark beetle. No other stand is above 5.6 per cent.

The five stands underburned in fall 2024 do not qualify. On their plots the contract crews marked many tagged trees not found and tallied the same trees again under new tags, nearly all of them trees the crews coded for bole char. Matched back to the 2021 stem map by position, species and diameter, those trees are alive, and the five stands lost 3.5 to 5.6 per cent. Read on tag numbers alone they would show 21.5 to 27.2 per cent and all five would be marked.

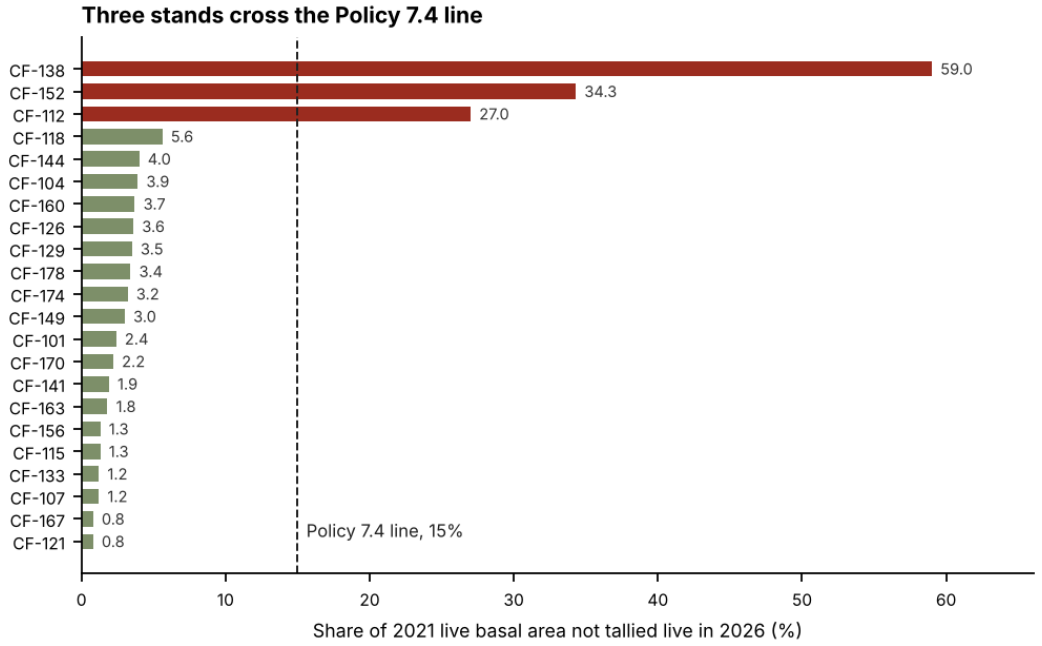

Figure 1. 2021 to 2026 loss by stand under Policy 7.4, section 2. Red bars are the stands to mark.

Stand table, 2021 and 2026 remeasurements

Stand	Acres	Last treatment	2021-26 loss (% of 2021 BA)	2026 live BA (sq ft/ac)	2026 net volume (bd ft/ac)	Mark
CF-101	212	-	2.4	165.4	25,660	
CF-104	168	prescribed underburn	3.9	202.4	32,460	
CF-107	254	commercial thin	1.2	196.9	32,940	
CF-112	**131**	**-**	**27.0**	**172.7**	**25,190**	**Yes**
CF-115	296	road right-of-way clearing	1.3	179.1	29,550	
CF-118	187	prescribed underburn	5.6	201.9	32,700	
CF-121	143	-	0.8	207.5	37,440	
CF-126	228	commercial thin	3.6	176.7	27,920	
CF-129	176	prescribed underburn	3.5	184.8	36,490	
CF-133	119	-	1.2	203.9	38,190	

Stand	Acres	Last treatment	2021-26 loss (% of 2021 BA)	2026 live BA (sq ft/ac)	2026 net volume (bd ft/ac)	Mark
CF-138	**263**	**wildfire (Juniper Saddle Fire)**	**59.0**	**73.6**	**10,680**	**Yes**
CF-141	154	-	1.9	197.6	31,190	
CF-144	201	prescribed underburn	4.0	180.8	29,770	
CF-149	238	-	3.0	172.1	29,550	
CF-152	**172**	**-**	**34.3**	**137.2**	**17,280**	**Yes**
CF-156	147	-	1.3	165.4	23,500	
CF-160	219	prescribed underburn	3.7	167.8	27,570	
CF-163	136	-	1.8	181.3	31,600	
CF-167	245	commercial thin	0.8	171.6	24,980	
CF-170	158	road right-of-way clearing	2.2	163.4	26,510	
CF-174	189	-	3.2	228.2	43,070	
CF-178	207	-	3.4	171.2	25,840	

Sources: CFI database, 2021 cycle; Tolan Ridge Forestry 2026 remeasurement export and September height return; plot register of September 29, 2026; GIS stand table.

Notes. Loss follows Policy 7.4: basal area at 2021 DBH of the trees tallied live in 2021 and not tallied live in 2026 (cut trees excluded), over the plot conditions mapped to each stand. 371 trees the crews tallied as added were linked to 2021 trees marked not found; 160 added records duplicated a tree the crew had also entered under its found tag and are counted once. Live basal area and volume are per acre of plot condition. Volume is net Scribner Decimal C from Table 1 of the field manual, sawtimber conifers 11.0 inches and larger; heights for plots measured July 20 to 24 are from the September revisit.

Tree-level fates for all 6,859 trees tallied live in 2021 are in tree_fates_2021_2026.csv. cc: Brandon Freeman, Inventory Forester.
