Rathbroe Pension Services
Member Operations Service Assurance Framework

Issue 3. Approved by the Member Operations Board, 12 January 2026. Owner: Head of Member Operations. Next review January 2027.

1 Purpose and scope

1.1 This framework sets out how member operations monitors the service it gives to members of the schemes it administers, and how it selects work for process review. It applies to the nine member-service case queues listed in the queue master.

1.2 It sits under the Member Service Standard, which sets the target for each queue and the rules of the service clock, and alongside the Work Measurement Standard, which sets the standard minutes for each case type.

2 Definitions

2.1 The financial year runs from 1 April to 31 March. A financial quarter is a quarter of that year, so FY2026 Q1 is April to June 2025. A financial year is named for the calendar year in which it ends.

2.2 A case queue is a team that handles one case type for members. A case belongs to the queue that held it when the response issued.

2.3 A participating scheme is a scheme listed in the participating scheme register. A scheme may be administered in sections under their own codes.

3 Monitoring

3.1 Performance against the Member Service Standard is reported each quarter to the Member Operations Board on the basis set out in the performance export.

3.2 The Board is notified where a queue falls below the ceiling in clause 4.1 of the Member Service Standard in two consecutive quarters.

4 Process review

4.1 One full process re-engineering review is commissioned in each half year. It is carried out by an external operations practice and is directed at a single case queue.

4.2 The review candidate for a half year is the case queue whose share of cases received in the preceding financial year that were answered later than the target set for that queue stands furthest above, in percentage points, the share the same queue reached in those of its quarters in the three financial years before that one which carried the same offered load. Every case received in the financial year is counted, including cases not yet answered at the extract date. The unit is the case queue.

4.3 Offered load is measured in positions-equivalents on the standard minutes set in the Work Measurement Standard. Staffed positions for a quarter are the positions rostered to the queue for that quarter in the rostered capacity record.

4.4 The candidate is recorded in the half year's service improvement response together with its own measured share for the year and the cases it received.

5 Governance

5.1 This framework is approved by the Member Operations Board and reviewed annually. Changes to clause 4.2 require the Board's approval.

Approved: Peadar MacVeagh, Head of Member Operations, 12 January 2026.
