2026 scheme year: abatement share not met, two crematoria designated

Certificate CMF-C-2026 of the trustees of the Crematoria Mercury Fund, made at their meeting of 24 February 2027 under section 5 of the Crematoria Mercury Regulation. To the Minister and the operators of member crematoria.

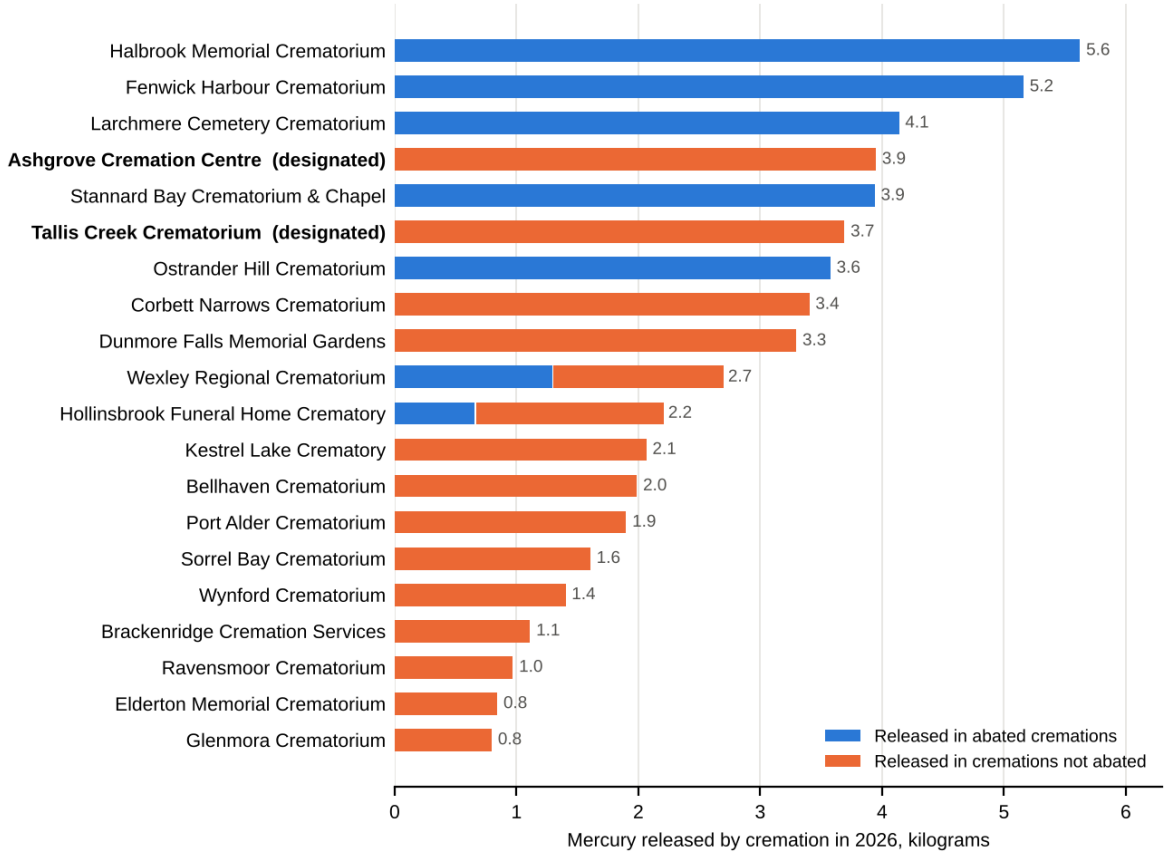

1. The trustees certify that about 45 per cent of the mercury released by cremation in the province in 2026 was released in abated cremations. That is less than the 55 per cent section 3 requires, so the 2026 scheme year did not meet the Regulation.

2. Under section 4 the trustees designate Ashgrove Cremation Centre (CM-1347) and Tallis Creek Crematorium (CM-0372). Their operators must connect every cremator to a commissioned mercury abatement plant by 31 December 2028. Counting the mercury released at Ashgrove Cremation Centre as abated, the share would have been about 52 per cent, still short; counting Tallis Creek Crematorium as well, about 59 per cent. No other crematorium is designated.

Basis of the estimate

The 29,294 cremations performed in the province in 2026 are those on the Vital Statistics Agency's cremation permits with a 2026 date of cremation[1]; a cremation is abated where its crematorium's abatement plant was commissioned before that date, which makes Wexley Regional and Hollinsbrook abated from 4 July and 15 September. The mercury of each person cremated is 0.55 grams for each tooth restored with amalgam, nil under 18[2]. The teeth restored with amalgam are read from the National Adult Dentition Survey by birth cohort: a person who died at a given age in 2026 was ten years younger at the 2016 survey and twenty at the 2006 survey, so each person takes the 2016 mean of their sex and cohort, carried to 2026 by that cohort's own change between the 2006 and 2016 surveys. The survey's age profile, applied at age at death, would describe the cohorts born ten years earlier. In all, 54.4 kilograms of mercury were released by cremation in 2026.

Mercury released by cremation at each crematorium, 2026

Wynford Crematorium	635	0	1.4	0.0
All crematoria	**29,294**	**15,332**	**54.4**	**24.4**

Mercury in kilograms to one decimal place; totals from the unrounded figures.

[1] Wexley Regional Crematorium's permits for cremations before 2 March 2026 carry the agency's former facility number for it, F1984, as the register's facility sheet records.

[2] Section 2(2) of the Regulation. The survey examines adults aged 18 and over; ages at death under one year are recorded on the permits in months.
